Subject: **Metro Environmental, Inc. Recommendation**

I'm pleased to endorse Metro Environmental for their Building Automation Systems (BAS) and temperature control service. Oakland University enjoys the benefit of an extremely user friendly and robust BAS system and the team approach Metro Environmental provides the University.

Oakland University is comprised of approximately 40 buildings on a 1,500 acre campus. While not all buildings have a BAS system, of those that do, roughly half have Automated Logic Corporation (ALC) controls.

ALC is a fine product that provides a BAS system that is easy to monitor, easy to schedule, and easy to integrate with other systems. The ALC hardware has proven to be very durable, so for the most part, we enjoy trouble free buildings when they are controlled by ALC.

Metro Environmental's staff is always prompt to respond to our needs. Their team approach has enhanced the operation of the ALC BAS while minimizing cost to the University.

Metro Environmental is a BAS partner to Oakland University and I recommend others to use Metro Environmental as their BAS partner.

Sincerely,

Dan Maxson
